Integration Engineer

Integration Engineer with 3 years of experience implementing and supporting enterprise API integrations for SaaS event platforms. Implemented approximately **10 new provider integrations**, enhanced **15+ existing integrations**, and supported **300+ customer integration deployments** across **30+ event platforms**. Experienced with REST and SOAP APIs, JavaScript/TypeScript, production support, data mapping, automated testing, and direct collaboration with clients and third-party API providers.

Professional Experience

42Chat | Software Engineer Oct 2021 – Jun 2024

- Managed implementation and production support for **300+ customer integration deployments**, typically configuring and monitoring 3–5 integrations each week.
- Designed, implemented, tested, deployed, and monitored one-way REST and SOAP integrations that synchronized attendee, registration, speaker, session, and schedule data into 42Chat.
- Implemented approximately **10 new provider integrations** and enhanced **15+ existing integrations** to support evolving APIs, customer requirements, and additional event data.
- Built and maintained integrations for **Cvent, Aventri, Swapcard, MapYourShow, CDSBridge, Informa, eShow, Experient, and TicketSauce**.
- Researched third-party APIs, determined technical feasibility, estimated implementation effort, and collaborated directly with clients and providers to gather credentials and validate requirements.
- Validated integrations using internal scripts and Jest before deployment, then monitored production synchronization to verify registration counts and required event data.
- Supported live events ranging from 1,000 to **50,000+ participants**, including Arizona State University graduation ceremonies and major enterprise conferences.
- Developed a compatibility solution following SOAP deprecation that enabled a major customer to continue integrating with minimal disruption.
- Investigated synchronization issues using MongoDB and Firebase, documented integrations, reviewed pull requests, and mentored a junior engineer.

TriggerPicker | Founder / Software Developer Oct 2024 – Present

Developing a Flutter/Firebase mobile application featuring recommendation logic, backend architecture, and cross-platform development.

Technical Expertise

Languages: TypeScript • JavaScript • SQL • Dart

API & Integration: REST • SOAP • API Integration • Data Mapping • Data Transformation • JSON

Frameworks & Databases: Node.js • React • Flutter • Jest • MongoDB • Firebase

Tools: Git • Linux • Raspberry Pi • API Testing

Education

DevMountain — Web Development (2019)
